İSTANBUL ANALYSIS SEMINARS

A NEW NOTION OF TAMENESS.

Riccardo Ugolini

University of Ljubljana

Abstract

In 1988 Rosay and Rudin described many properties of the group of holomorphic automorphisms of C^n , $n > 1$. Later on their ideas were applied to more general complex manifolds. Starting from their work, we will explore an equivalent definition of tameness developed in the last year in collaboration with R. Andrist.

Date : Friday, May 4, 2018

Time: 15:40

Place: IMBM Seminar Room, Boğaziçi University South Campus

İstanbul Analysis Seminars is supported by Sabancı University and TMD.
