SUBORDINATION AND SUPERORDINATION RESULTS FOR ANALYTIC OPERATORS

Teodor BULBOACĂ

Babeş-Bolyai University
Faculty of Mathematics and Computer Science

Abstract: The lecture shows some recent results obtained by the author involving different classes of analytic differential and integral operators that preserve the subordination and the superordination, in order to obtain *sandwich-type* and *modified (weighted) sandwich-type* results. These new results extend a few of the previous ones belonging to different authors, and moreover, some interesting applications obtained for appropriate choices of the parameters are also given.
