DRAGILEV'S CONTRIBUTION TO MATHEMATICS

Vyacheslav P. ZAKHARYUTA

Sabancı University
Faculty of Engineering and Natural Sciences

Abstract: Mikhail Mikhaylovich Dragilev, an outstanding Russian mathematician, is 90 in this year. His results in Complex Analysis and Functional Analysis exert great influence on investigations of many mathematicians from several countries, including Turkey. In my talk I am going to represent a survey of his most important results, tracking the influence, mentioned above. It turns out that I am being under great influence of Professor Dragilev myself during already more than half a century. So, I will try not only to give a look to his mathematical achievements but to reveal also an image of a man of excellent personality.
